

AI Notice

Last update: 2025-09-29

Introduction

Huwise enables its users to rapidly create and share new, more accessible, relevant and easily reusable data experiences. By facilitating access to data, our customers improve their operations, stimulate the development of new services and strengthen trust with their stakeholders.

To support these objectives, Huwise integrates AI-powered functionality into its services, enabling its customers to dramatically improve the performance and search experience of their users on their data portals.

This notification for Huwise's corporate customers outlines the evolution of our DPA.

DPA evolution with the addition of new subcontractors

Our standard Data Protection Agreement (DPA) is changing to include OpenAI and Mistral AI as new subcontractors to Huwise.

Identity of the Sub-processor	Categories of processing carried out	Location of processing operations	Transfer outside the EU	Concerned Data	Comments
-------------------------------	--------------------------------------	-----------------------------------	-------------------------	----------------	----------

OpenAI	<p>If the Customer is located outside the EU or if chosen by the Customer:</p> <p>1. Provision of the data asset vectorization feature for search purposes.</p> <p>2. If the Client subscribes to the option: Generation of visualizations via a conversational agent.</p>	USA	Yes	<p>1. Data asset vectorization feature: Five metadata elements are sent: asset_title -> dataset title asset_description: text description asset_theme: theme assigned to the dataset asset_keyword: descriptive keywords territory: geographical metadata</p> <p>2. Automated visualization generation: The metadata default_title (dataset title) is sent, along with the dataset schema (for each field: name, type, label, text description). Additionally, a random sample of records, limited to 50 records, is also sent.</p>	DPA/SCC SOC 2 and SOC 3

Exploring other AI solution providers

Huwise expresses its willingness to explore other solution providers for the use of AI, with the aim of offering its customers greater flexibility.
